PROFESSIONAL GOALS

For several years I have worked with rural and urban communities on how to improve livelihoods developing projects focused on socio-environmental development. I have worked with mining communities for over 5 years where I have overcome many challenges such as improvement their housing conditions, sanitation in mining camps and encouraging cultural, environmental education and recreational activities.

In the last five years I focused on urban sustainability projects, in La Paz city in Bolivia to forward food security, agro ecology and to implement renewable energies in architecture projects.

In 2015 I embarked on the biggest challenge of my career to date, creating a urban infrastructure prototype for sustainable living. This project is now accessible to everyone in La Paz. It achieved its objectives in mid-2019, raising awareness on climate change, sustainable living and food security. @TheBiotopeBoutiqueHouse

CAREER OVERVIEW

- Urban Planner. 6 years
- Mining infrastructure and environment project developer. 5 years
- Systems architecture developer. 6 years
- Sustainable architecture desing and developer. 5 years
- University researcher and thesis advisor. 4 years
